

Modern Workforce

Do more, spend less

Cost savings is the most obvious benefit of outsourcing. Due to the difference in labour costs between Western countries and Asia, you can get the same highly-skilled staff at a fraction of the cost of hiring locally. You can save up to 70% of your labour costs by outsourcing with Compass Business Advisory without sacrificing quality.

Free your key Staff's time

A large percent of your staff's valuable time is consumed by tasks that could easily be outsourced. Compass Business Advisory will help you transition many of these tasks to your offshore team, freeing up the time of your key staff so they can focus on the things that matter to your business.

Great Staff without the overheads

Compass's modern workforce delivers all the benefits of in-house staff, but without all the management overheads and workspace costs normally associated with local hires. While you manage your staffs' tasks, Compass manages almost all the other day-to-day needs of your staff, including: office space, hardware and software, support, connectivity, security, HR, recruitment, payroll, retention, and termination.

Recruitment specialists deliver the right Staff

Finding and retaining the right staff can be very difficult. Our technology platform and ecosystem have taken away the challenges of working with remote teams, providing seamless integration of global workforces. When location is no longer a recruitment constraint, you get access to an incredible pool of highly-skilled, dedicated workers. Our professional recruitment department has tens of thousands of highly-skilled pre-screened candidates. They are dedicated to finding you the very best people for your team.

Taking Security Seriously

We understand how critical security is to modern businesses. Customer's hardware is isolated on the network, software is kept up to date, and staff undergo security and privacy training. Compass also offers fully customisable levels of security to protect your valuable corporate IP, domain knowledge, and data.
